★ CAREER HIGHLIGHTS

- **1000+ commits across 20 repositories** in three years, from Django REST APIs to LLM platform forks.
- **AYO**: top contributor of five engineers on a COPPA-compliant LLM platform for 2,400 children.
- **Govara**: built the audit trail and S3-backed document management system for a compliance SaaS.
- **LMS Platform**: built over half the codebase, from the quiz engine to automated certificates.
- **SmallsLive**: fixed 3-D Secure and per-venue payment routing for three NYC jazz venues.
- **IEEE ICCIT 2025**: first author, 99.28% accuracy on Vision Transformer bearing-fault diagnosis.

📺 CORE TECHNICAL SKILLS

LANGUAGES	Python (advanced), JavaScript (ES6+), Java, C++, C, SQL, Bash
BACKEND	Django, Django REST Framework, Celery, django-oscar, Node.js / Express, REST API design, drf-yasg / Swagger, WeasyPrint, Stripe (3-D Secure / SCA), PayPal
FRONTEND	Next.js (App Router), React, Vue.js, Tailwind CSS, shadcn/ui, HTML5, CSS3
DATA & CACHING	PostgreSQL (query planning, <code>pg_restore</code> , sequence repair), MongoDB / pymongo, Redis, Supabase
AUTH & SECURITY	Keycloak (OIDC, PKCE), SimpleJWT, RBAC and permission groups, audit logging, COPPA and UC MSSEI P3
LLM PLATFORM	LiteLLM (fork: guardrails, callbacks, routing), LibreChat (fork), content-filter and moderation guardrails, RAG, OpenAI API
CLOUD & INFRA	AWS (S3, CloudWatch), GCP (Cloud Storage, signed URLs), Cloudflare Pages, Docker and Docker Compose, nginx, VPS, GitHub Actions
TESTING & CORE	pytest, pytest-django, model_bakery; Data Structures & Algorithms, System Design, Performance Optimization, Linux / Unix

🏢 PROFESSIONAL EXPERIENCE

Software Engineer — Idlewild Digital, Dhaka (On-site)

Mar 2026 – Present

Backend and platform delivery across five client products, from architecture through deployment and production incident tracing.

AYO COPPA-compliant LLM research platform, UC Berkeley Kidd Lab · 180+ commits | [Django](#) · [LiteLLM](#) · [LibreChat](#) · [Keycloak](#)

- Top contributor of five engineers, across the Django/DRF API and both upstream forks the platform runs on.
- Moved chat persistence off a LiteLLM middleware hook into LibreChat's own request path, dropping a dependency.
- Age-aware child-safety guardrails: Django rules resolved per participant age, Redis-cached on a 20-minute TTL, enforced in the LiteLLM proxy, with trigger metadata captured for researchers.
- Streaming CSV and Celery bulk-ZIP export behind signed GCS URLs, timezone-correct per participant and N+1-free.
- Keycloak SSO with refresh-and-retry, built to the UC Berkeley P3 MSSEI security protocol.

Govara compliance SaaS for security and regulatory self-assessment · 200+ commits | [Django](#) · [AWS S3](#) · [CloudWatch](#) · [Celery](#)

- Shipped the S3 document library: immutable versioning, rollback, soft delete, checksum deduplication, and a provider-agnostic storage layer that lifts into another project with only a storage setting.
- Built the audit trail to CloudWatch through SimpleJWT's token path, after finding it bypasses Django's login signal, with sensitivity-tiered retention on a scheduled Celery task.
- Traced a 403 to a deploy script that never attached new permission rows to groups, and a 125% completion report to a join counting answers once per evidence file. 272 tests green.

Shikago multi-vendor marketplace · 70+ commits | [django-oscar](#) · [Docker](#)

- Enabled seller-created multi-variant products, which Oscar scopes to admins only, and auto-assigned partner ownership so parent products stop dropping out of the seller's list.
- Made order status product-specific so one seller cannot move a shared order; automated pre-migration database backups with Compose volume validation.

SmallsLive ticketing for three NYC jazz venues · 90+ commits | [Django](#) · [Stripe](#) · [PayPal](#)

- Fixed 3-D Secure card authentication for guest and artist accounts, and routed refunds and PayPal payments to the correct per-venue account.
- Resolved a concurrent booking collision across venues, added automatic cancellation on stock-out, and built venue-filtered sales reporting.

Instigate Expo mobile app | [Cloudflare Pages](#) · [Supabase](#) · [Django](#)

- Took the deployment pipeline from two environments to three, and designed the Django integration keeping Supabase as schema authority under a bypass-RLS JWT role.
- Fixed an Expo Router bundling failure blocking native builds and cut the production web bundle via Metro config. 866 tests verified.

Backend Developer — Idlewild Digital (Remote)

Jan 2024 – Feb 2026

Django REST Framework product delivery for US clients: learning management, freight logistics, community platforms, and classifieds.

LMS Platform learning management platform · 150+ commits | [Django REST Framework](#) · [PostgreSQL](#) · [WeasyPrint](#)

- Built the quiz and assessment engine: submission APIs, per-question marking, a 70% pass mark, and unlock flags gating lesson progression.
- Automated certificate issuance on quiz completion with WeasyPrint PDF rendering, plus role-based permissions and enrollment tracking.
- Built the course content pipeline with YouTube duration extraction, and an admin media flow cropping images to WebP on save.

Crabarian air-cargo export booking and logistics platform · 90+ commits | [Django REST Framework](#) · [PostgreSQL](#)

- Built flight notices, booking information and shipment filtering, with signals that recalculate box availability and warn when allotment drops below what is confirmed.
- Built role-based permissions across companies and booking partners, then refactored the data model onto proper multi-company ownership.

American Provost Connect professional community platform · 50+ commits | [Django](#) · [Vue.js](#)

- Built forums, articles, webinars and events end to end: join flows, admin notification, user connections, follow, and account suspension with soft delete.
- Extracted a reusable admin permission mixin, fixed timezone handling across posts and replies, and integrated the Vue.js frontend.

AutoMarket automotive classifieds · 20+ commits | [Django](#) · [WebSockets](#)

- Built subscription APIs, the admin draft-to-active publishing flow, advertisement renewal, and SEO fields across API and web frontend.

Python Intern — Idlewild Digital

Aug 2023 – Dec 2023

First engineering role, owning one internal system end to end on Linux/Unix.

Daily Updates internal reporting system · 55+ commits | [Django](#) · [PostgreSQL](#) · [nginx](#)

- Owned the full SDLC: accounts, report models, templates, and nginx deployment.
- Built PDF export with WeasyPrint, moved authentication onto email-based signup, and later added a GitHub Actions self-hosted runner for automatic deployment.
- Promoted to Backend Developer in 5 months.

PROJECTS & PUBLICATIONS

- **Vision Transformer Classification of Bearing Faults** First author · IEEE ICCIT 2025 — Fault diagnosis from STFT vibration spectrograms at 99.28% accuracy on the Paderborn University dataset. DOI: 10.1109/ICCIT68739.2025.11490241. *Python, PyTorch, Vision Transformers*
- **University Certificate Automation System** Khulna University ICT Cell — Full-stack certificate issuance and verification platform. Led the architecture, security model and deployment design, and pitched it to the cell. *Django, Vue.js, PostgreSQL* — [Backend](#) · [Frontend](#) · [Live Demo](#) · [Slides](#)

EDUCATION

B.Sc. in Electronics & Communication Eng. — Khulna University

Graduated Jan 2026

- **Coursework:** Data Structures & Algorithms, Database Systems, Computer Networks, Object-Oriented Programming.
- **Industrial attachment, Grameenphone Ltd. (Jan–Feb 2025):** built a RAG chatbot API for support automation.
